# Monthly Factsheet / March 2021 CYD Diversified Commodity Index

The CYD Diversified Commodity Index seeks to capture time-varying risk premia in commodity-futures markets in a broadly diversified index strategy conditioned on the futures term structure. From an overall universe of 29 commodity futures the index chooses those 9 futures, which denote the highest roll yield and therefore show the highest backwardation (least contango) plus fixed positions in gold and silver for diversification purposes. The expirations are selected based on a fixed roll table, with an emphasis on longer-term maturities. All futures positions are fully collateralized using 3-month US-Libor. Group restrictions are applied to take optimal advantage of the diversification effects of the commodity futures markets and comply with ESMA regulations.
