Operations / Information Technology

Graduate Trainee Program – Software Engineering

Dreaming of a career in Information Technology?
In Information Technology, we focus on core tasks like
Application management, System engineering and global
IT Operation.

What does our Enterprise Platform Environment at Vontobel offer?

The GTP "Software Engineering" is focused on System Engineering within our Enterprise Platforms environment, who is responsible for providing state-of-the-art infrastructure services to the Vontobel Group. Its private cloud delivers complete range of infrastructure products:

- Collaboration services and virtual desktops
- Platform-as-a-Service/PaaS products for business applications
- Virtual machines (Linux, Windows, Solaris) and database services (Database-as-a-Service/DaaS with MSSQL and Oracle) implemented with highly virtualized platforms, monitoring and alerting as well as a broad range of security and cyber threat protection services.

Enterprise Platforms functions acc to agile principles, small teams of well-educated and experienced technology specialists design, engineer and operate these services in a cost-efficient manner at high quality and scale, while making these services consumable through self-service gateways.

The overall program stretches over a total period of 24 months.
